CUSTOMIZED TRAINING PROGRAMS

Knowledge is the power that keeps a team going. We develop customized training programs based on your process, equipment, and specific needs. We examine your equipment in-depth, covering everything from the foundation up. We help you understand possible failures, how to plan for them, how to avoid them, with proper preventive maintenance scheduling. Our focus is on reliability, explaining product errors, good quality control, and emphasizing good communication.

Training sessions often begin with a classroom portion with the most important part being hands-on training with your equipment. Our team can do on-site training at your facility for the highest impact or your maintenance technicians may choose to come to our facility in East Troy, Wisconsin.

Six sigma statistical method of data collection is the basis of our maintenance system. Our training emphasizes meticulous attention to detail and can often lead to predicting failure of equipment up to six months in advance! We know the equipment down to the component level making it hard to beat our depth of knowledge and training.

Our team will work with any level of management, production, and maintenance personnel to create the right program for you. Ease of implementation will help guarantee success.
CONSULTING

Advice is often the stimulus to getting a project done quickly and accurately. We will save you money, immediately and in the long run. We are excited to share our extensive knowledge in the application of metal finishing power and control. We offer consultation focused on line improvements, process efficiency improvements, standardized process controls, reliability, power safety, and possible technology updates that could be implemented.

Management can utilize our service to help determine your return-on-investment for process improvements or to justify capital expenditures. Early planning of power upgrades or equipment changes will reduce costs at installation and avoid specifying the wrong equipment. We often recommend a responsible level or oversizing equipment to enhance reliability.

Professionals in our network help us go beyond our in-house capabilities. We often team up with line manufacturers and chemical suppliers to give you the right comprehensive solution.

Improving your business is one step away.
