

PREVENTIVE MAINTENANCE

CUSTOMIZED PROGRAM YIELDS MAXIMUM EFFICIENCY!

Preventive maintenance is the key to an efficient and well-functioning facility. JP Tech offers preventive maintenance programs tailored to your needs. We will perform an onsite survey of equipment and resources to develop a plan that incorporates quality, production, and maintenance goals.

Reliability is the key to minimize downtime, maximize quality, and increase profitability of your production lines. We take special care to inspect individual components and compare to historical trends to ensure that equipment failures are avoided. Our experience and trend analysis minimizes failures, helping to avoid snowballing, costly damages.

Service can be scheduled as often as needed. We will work with your schedule and planned downtime. Most programs are optimized for quarterly on site maintenance visits.

PREDICTIVE MAINTENANCE

Inspections by our engineers allow us to monitor equipment over time using methods developed over 30 years in the metal finishing industry. We focus on in-depth statistical analysis and tracking individual components' mean rates of failure, allowing us to predict breakdowns and repair machines before damage and downtime occurs. We compensate for usage and environment when analyzing reliability.

Up Time is maximized by scheduling and minimizing downtime to repair and update older equipment. Our customers are always amazed at the difference in reliability and elimination of downtime within the first year of this program. Most major problems can usually be eliminated within the first two visits. We can achieve 100% up time and completely avoided unscheduled maintenance in many instances.

Predictive analysis is truly the method that works best in our experience. Reactive methods are costly due to emergency labor, shipping, and maintenance. Reactive methods always leads to quality issues and unsatisfied customers . Customers will be impressed with the result

of a well designed preventive maintenance program.

ISO 17025 and ISO 9001:2015 compliant certificates of calibration are provided after completion of inspections and service. We can train your on-site maintenance technicians to take advantage of this program.

Discounted parts and products from JP Tech are included in quarterly service agreements. We will also draw off your inventory and help you maintain responsible and cost effective levels.
